

Model B38

The B38 range of scrubber-dryers is extremely compact and easy to handle, suitable for working nimbly and quickly in tight spaces: it has all of those technical solutions which make the most modern scrubber-dryers stand out. It is designed to minimise the user's work. It has maintenance free batteries which last about an hour as well as a built in battery charger. The rudder can be easily inclined to adapt to any operator and this is where the user will find the extremely intuitive controls, well grouped and easy to reach. The recovery reservoir has a wide opening to facilitate sanitizing. The floor floor-wiping unit is completely adjustable without the need for tools and is capable of drying every corner. It is available in three versions: wired or battery operated as well as a third version which can operate both wired or by battery.
