

DRUM TRANSFER PUMPS

The drum transfer pumps consist of a dip tube, at the end of which the open impeller is fitted. It is secured to the drive shaft, connected to the pump with a ring nut. The operation consists of an impeller integrated with the shaft, connected to the electric or pneumatic motor with a coupling joint.

The transfer pumps must be used exclusively vertically

and with the pump immersed in the fluid. Dry-running or the presence of air bubbles could damage the shaft guide internal bushing. These portable drum transfer pumps are ideally suited for pumping corrosive fluids and work by being immersed in the liquid. Their construction shape has been designed to collect any product spillages in the drum.

- Product designed and constructed in Italy
- Portable
- Suitable for corrosive fluids
- Possibility of adjusting the flow rate (in the version with pneumatic motor)
- No mechanical seals
- Easy to disassemble
- Viscosity up to 900 cps
- Max flow rate 90 l/minute

TR - Drum transfer pumps

TR-EL SERIES - Electric motor

Drum transfer pumps with 800 Watt electric motor and open impeller that allows the continuous pumping of clean corrosive fluids with apparent viscosity up to 900 cps. The pump is fitted with a safety switch to prevent any accidental restarts after a drop in the power supply.

Electric motors technical specifications

Power	800 Watt
Voltage	230 V sin-
